**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

**Claim 1 (amended)**

A golf swing practice device for use with a golf club having a club head, a club shaft, and a grip portion, said golf swing practice device comprising:

a body having first and second ends for securement to a golf club so that said first end is at the upper end of said golf club remote from said club head, and said second end is fitted to the club shaft at a position below the grip portion thereof;

wherein said body has a pair of first laser light sources at said second end, each of said laser light sources being directed downwardly and outwardly from said second end of said body so as to create diverging beams of light which pass by the front and rear faces of said club head in a first plane[.]; and

wherein the securement of said body at said first end thereof to said golf club is by a pin axially inserted into the end of the golf club remote from said club head, and at said second end thereof by a geared clamp positioned below the grip portion of said golf club so as to be symmetrical about said longitudinal axis thereof.

**Claim 2 (cancelled)**

Application No: 10/615,183  
Reply to Office action of 04/21/2004

**Claim 3 (original)**

The golf swing practice device of claim 1, further comprising a second laser light source located near the first end of said body and directed so as to create a beam of light in a direction parallel to the longitudinal axis of said club shaft and away from said club shaft.

**Claim 4 (original)**

The golf swing practice device of claim 3, wherein said second laser light source creates a beam of light having a configuration chosen from those that are such that when said light impinges on a target it will form a dot of light or a line of light.

**Claim 5 (original)**

The golf swing practice device of claim 3, wherein said device further comprises a position sensitive switch cooperating with said second laser light source in such a manner that said second laser light source is illuminated only when said golf club is oriented so that said club head is at an elevation equal to or above said position sensitive switch.

**Claim 6 (amended)**

The golf swing practice device of claim 4, wherein when said second laser light is such as to form a line of light, the locus focus of said line of light as it impinges on a target may be altered by a rotatable lens associated with said second laser light.

**Claim 7 (amended)**

The golf swing practice device of claim 2 1, wherein said geared clamp is spring loaded against the closing action of a locking shaft therefor.

Application No: 10/615,183  
Reply to Office action of 04/21/2004

**Claim 8 (original)**

The golf swing practice device of claim 1, wherein said pair of first laser light sources diverges in such a manner that when the light beams therefrom impinge on a target at the club head end of said golf club, the distance between the light impingement targets is in the range of 15 to 21 cm.

**Claim 9 (original)**

The golf swing practice device of claim 1, wherein the body of said device is formed from a polycarbonate plastics material.

**Claims 10 – 19 (withdrawn)**
